

The Predictions in Public Project:

Evidence-based principles for communicating predictions to the public during an emergency

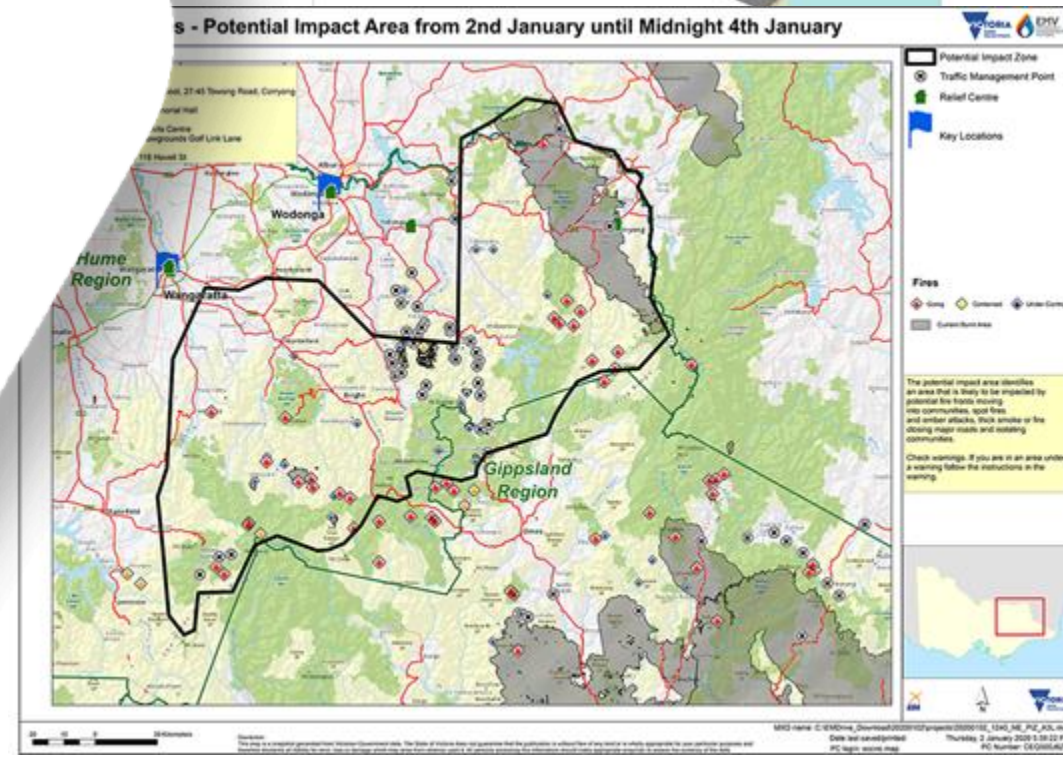

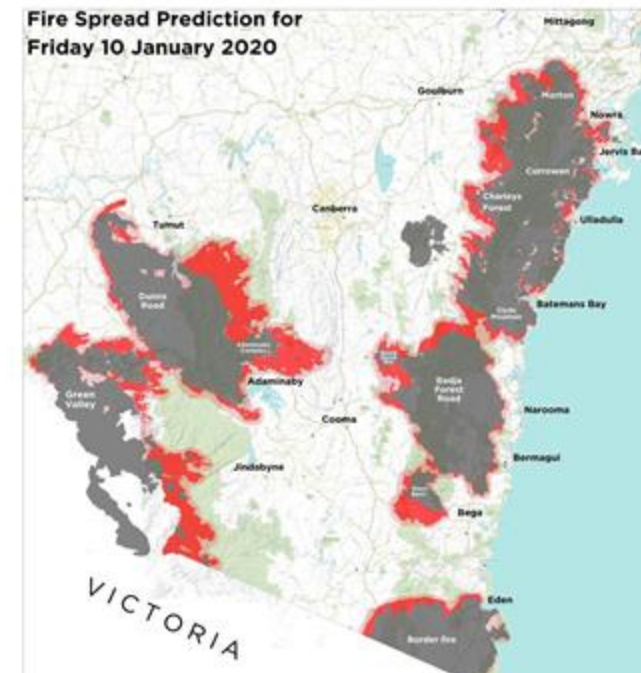

Reflections on Research Translation

June 20, 2025

Background

- Technological advancements
- Expectations from the public
- Recommendations from reviews, inquiries, and royal commissions
- Political pressure
- Previous research in Victoria:
 - Support for use of predictions in public
 - Concerns for how to embed predictions into existing warning products and when and how to release them.

Project Aim

To use **empirical evidence** and **collaborative processes** to contribute to the develop of **national evidence-based guidance** for the future use of public-facing predictive fire spread products during an emergency.

Project Stakeholders

Project team

- Chloe Begg (CFA)
- Angela Gardner (Vic Dept Ed)
- Paula Dootson (QUT)
- Amy Griffin (RMIT)
- Erica Kuligowski (RMIT)
- Timothy Neale (Deakin Uni)

Project Steering Committee:

Representatives from **AFAC PSG** and **AFAC WG** from each Australian jurisdiction.

- **TAS** - Mark Chladil (PSG); Heather Stewart (prev. Peter Middleton) (WG)
- **WA** - Jackson Parker (PSG); Anni Fordham/Deana Pullella/Tim Vella (WG)
- **QLD** - Moo Price (prev. Jack Emueleus) (PSG); Jennifer Kerr (prev. Alex Battye and Anna Grohn) (WG)
- **NSW** - Laurence McCoy/David Field (PSG); Ben Shepherd (prev. Anthony Clarke) (WG)
- **VIC** - Chris Morton (prev. Phillip Brien and Alice Gower) (PSG); Reegan Key/Marc Unsworth/Peter Wall (WG)
- **ACT** - Ailish Milner/Ryan Lawrey (PSG); Leighton Bush (prev. James Morris) (WG)
- **SA** - Simeon Telfer (prev. Mike Wouters) (PSG); Monique De Silva (WG)
- **NT** - Don MacCorquodale (prev. Akshy Athukorala)
- **BOM** - Vikki Heinrich (prev. Fiona Dunstan)

Why collaborative research?

- **The PiP approach to collaborative research** assumes that if **those who are supposed to benefit from the research are actively involved in each step of the research**, the translation of that research into practice will be more effective than if they were not involved throughout.
- Research translation as a **process** rather than an output.
- **Translation that goes both ways** – research ↔ practice.

Challenges for Research Translation

Challenges for EM agencies:

Current research use:

- Issues related to access to research and relevance of research to a specific context (e.g., resourcing, capability and governance).
- Research translation not part of people's job description.

Incentives:

- Lack of time and capability to work through the implications of the research and its practical relevance for their work/organisation.

Challenges for research institutions:

Methods and skills:

- Research often yields generic, non-contextual findings.
- Problem definitions driven by theory, not real-world needs.
- Results communicated using outdated 'knowledge deficit' model.
- Limited capability for joint knowledge creation with stakeholders.

Incentives:

- Emphasis on objectivity can limit relevance to practice.
- Impact defined by journal publications.
- Limited funding for translation.

A traditional project would have...

- Identified community needs
- Created maps that meet those needs
- Produce reports with recommendations for what agencies need to deliver to meet community needs.

Instead, we....

Project Design

Phase 1:

Understanding current agency practice and community comprehension and use of existing public-facing map-based products (i.e., incident warning maps and fire spread prediction maps).

Phase 2:

Development and community testing of public-facing fire spread prediction map concepts.

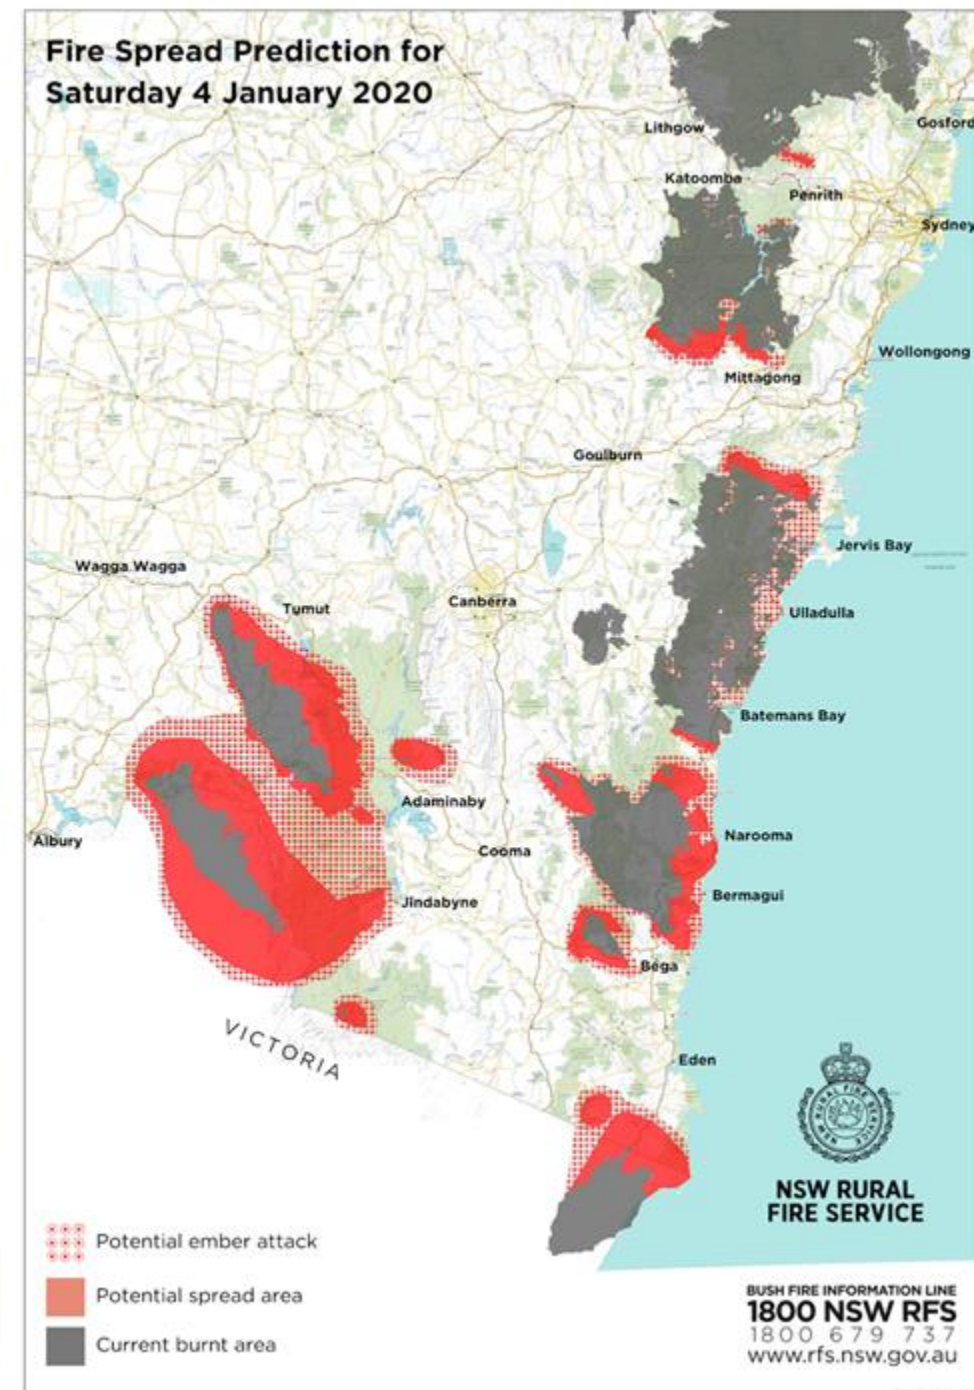

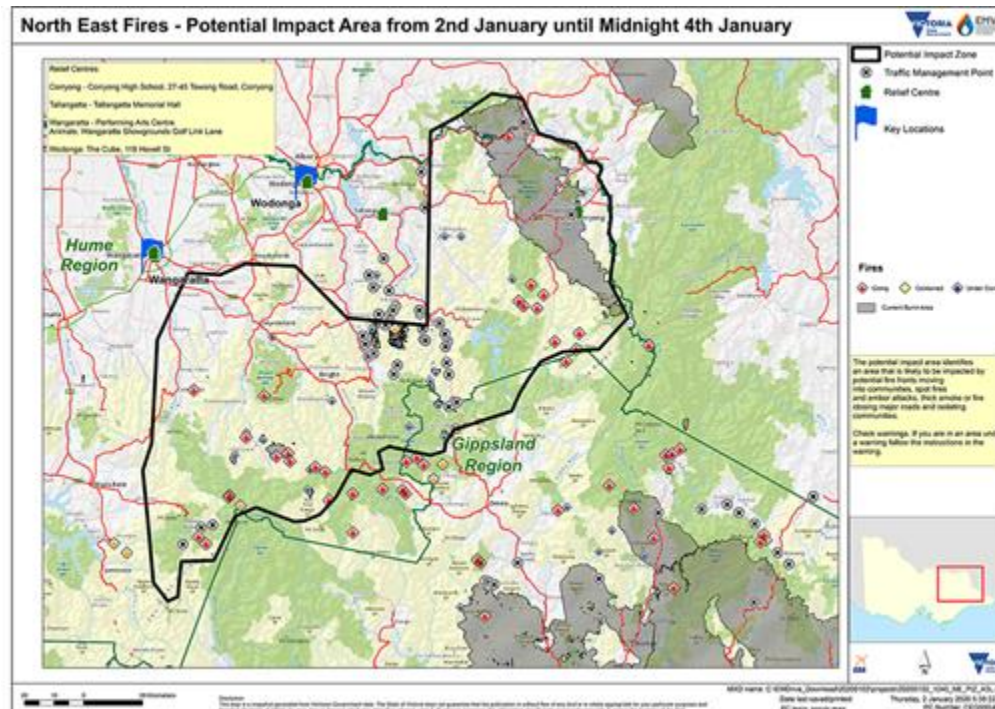

Phase 3:

Development of practical outputs for agency use.

Current Practice: Fire Agencies

- Agencies are under pressure to **improve the timeliness and accuracy of warnings**.
- Predictive products have been used in the past to **raise awareness** and to **encourage early evacuation**.
- Also, **two different products** that have been used in the past:
 - PIA
 - FSPM

Current Practice: Fire Agencies

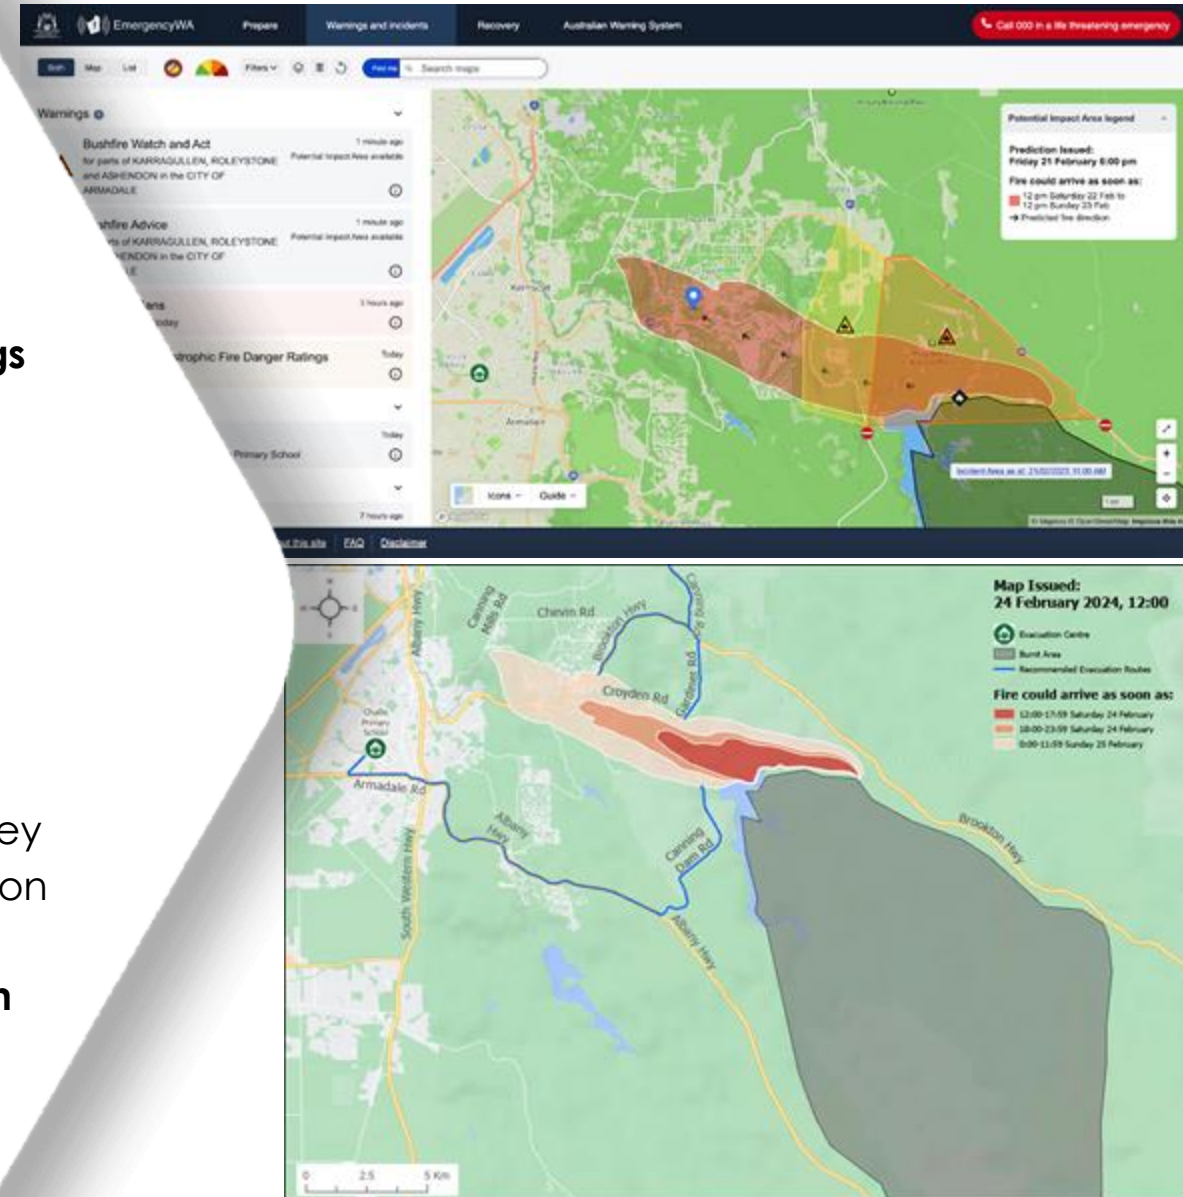

Consensus from the **Project Steering Committee** that:

- Predictive products and warnings are **separate products**:
 - **Warnings = current risk**
 - **Predictive products = potential risk over the next 12-24hrs.**
- Predictive products should support the Calls to Action in the warnings by providing extra risk context/information.

Community Expectations

- Members of the **public have similar expectations for warnings and predictive products. They are using them to understand:**
 - their **location** in relation to the fire hazard,
 - the **direction** of the fire hazard,
 - **how long** they have until it reaches them, and
 - how to **evacuate** safely including routes and specific locations.
- If people **cannot find that information** in agency products they will **delay action**, seek additional information, or infer based on their knowledge/social and environmental cues.
- **Predictive products** are perceived to be **more accurate than warnings**.
- **Predictive products encourage people to leave earlier than warnings**.

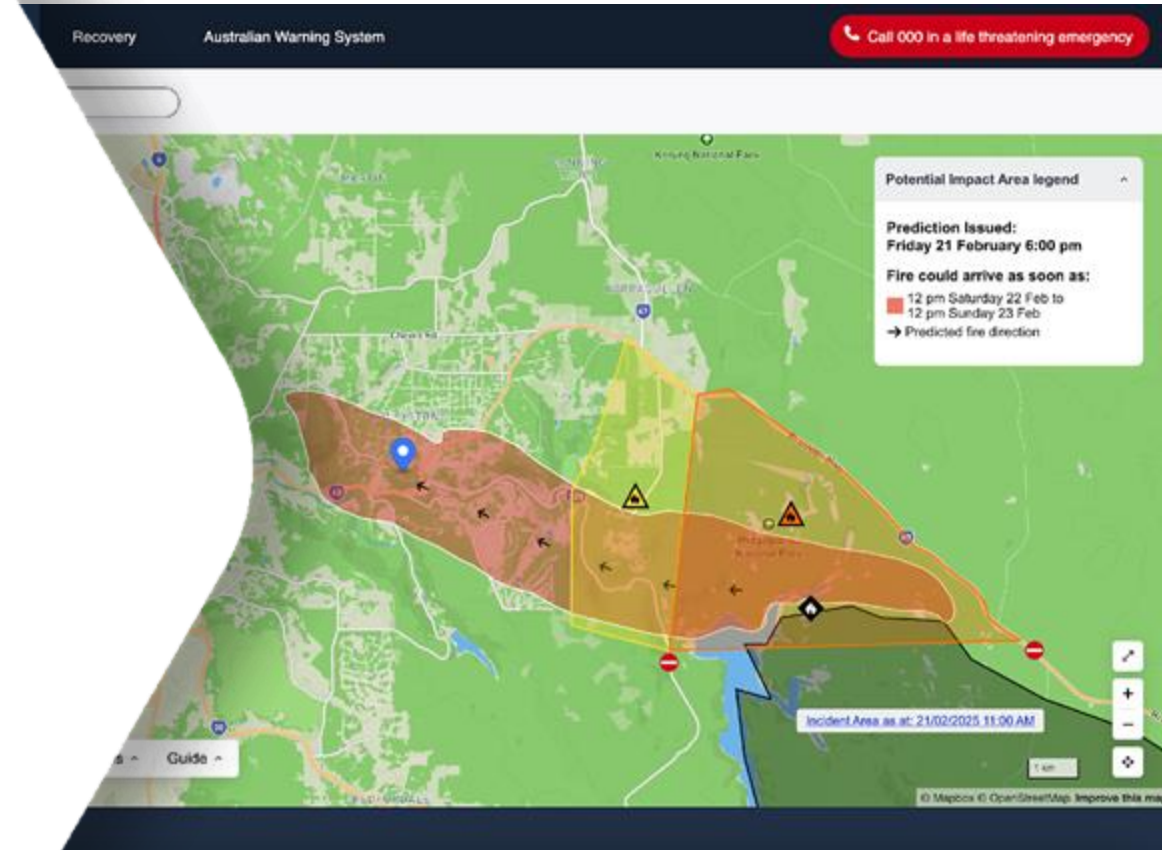

Challenges:

What we know:

- Community members are seeking specific information, regardless of whether it is presented in warnings or predictive products.
- If they cannot find that information in agency products, they will likely delay action.
- Fire agencies do not always have access to the information the public are seeking.

Challenges:

- Communicating uncertainty.
- Balancing community expectations with the existing fire agency governance, systems and capabilities to improve community safety.
 - What are the repercussions of not meeting community expectations?
 - Will providing more information improve community safety?

Next Steps

It's complex, but we are working on it by...

- ✓ Completing community research
- ✓ Utilisation: Finalising evidence-based principles + 2 additional practical outputs

Principle 1: Triggers for map production, dissemination, and updates

Principle 2: Communicating risk and uncertainty - *Design*

Principle 3: Communicating risk and uncertainty - *Language*

Principle 4: Ensuring predictive maps complement incident warning maps

Principle 5: Community education and engagement

Principle 6: Feasibility and authorisation environment

Thank you!
